DETAILED ACTION

Claims 1-14 are currently presented in the instant application according to the Applicant's filing on 08/26/2003.

Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it must be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with the Applicant's representative, Mr. Jon Gibbons, on 08/10/2004.

The Examiner's Amendment includes:

CLAIMS:

Claim 1, line 7 (starting with "*an oscillating circuit*"), change "a" to --the--;

Claim 9, line 9 (starting with "*a phase control loop*"),

(a) change "a phase detector" to --the phase comparator--;

(b) after "sine wave", insert --feeding back to the phase comparator--;

line 10 (starting with "a reference square signal"),

after "signal" insert --at the first input--

Claim 13, line 2, replace "a sinusoidal output signal" with -- the signal having a sinusoidal form--; and

Claim 14, line 1, change "15" to -9--;

Line 2, replace "sinusoidal output signal" with --sine wave--.

Allowable Subject Matter

2. Claims 1-14 are allowed.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance:

The closest prior art fails to disclose or fairly suggest:

- A sinusoidal frequency generator, in which the oscillating circuit is a gyrator with two transconductance amplifiers; and the two transconductance amplifiers each has a differential structure with an active load with a bias point fixed by the control voltage in order to regulate the oscillation frequency and for generating a signal having a sinusoidal form, in combination with the remaining claimed limitations, as called for in claim 1; or
- A converter for converting periodic square signals into sinusoidal signals including (a) a phase comparator with a first input and a second input which respectively receive an output signal from a digital synthesizer and a feedback squared signals; and an oscillating circuit includes a gyrator composed of two transconductance amplifiers each has a differential structure with an active load with a bias point fixed by the control voltage in order to regulate oscillation frequency, in combination with the remaining claimed limitations, as called for in claim 9; or
- A semiconductor product including a phase control loop, in which a phase detector compares a sine wave with a reference square signal; and an oscillating circuit includes a gyrator composed of two transconductance amplifiers whose bias points are fixed by the control voltage in order to regulate oscillation frequency, in combination with the remaining claimed limitations, as called for in claim 11.

Art Unit: 2816

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
